Building A PC In Easy Steps: Covers Windows 8

Synopsis

For those who want more than the standard pre-built PC. Pre-built systems are often a compromise between what the manufacturers want to sell you and what you want to buy. One solution is to build it yourself. Buying a copy of Building a PC in easy steps is the first step in the right direction to build a PC. Written in concise and easy-to-understand style, this book will take you by the hand and walk you through all the stages of building and setting up a computer: Buying the parts and avoiding sales scams; mastering and installing each component (CPU, memory, video, etc); altering default settings in the BIOS for optimum performance, installing and configuring device drivers. The troubleshooting chapter is invaluable in the event of problems. By the time you've finished, you will have a computer that's tailored to your exact requirements with no superfluous features or functions. This fourth edition covers Windows 8 and 8.1

Book Information

Series: In Easy Steps

Paperback: 192 pages

Publisher: In Easy Steps Limited; 4 edition (October 29, 2013)

Language: English

Customer Reviews

I now during 32 years daily have been using PCs, and own 10 - 15 books concerning PCs, most concerning programming, but my last bought PC building book now is 20 years old so I had to buy a new one. I didn't buy the book for learning how to build a PC, as I learned this back in the schools, but because I'm now on the 12th year live in Thailand, and here totally am missing in being up to date concerning the part inside the PCs, and soon will have to rebuild one of my PCs. So I'm searching knowledge for the best combination of Motherboard, Music card, RAM

memory, the Ports, and so on, to use, when renewing the actual PC. When living in Denmark I weekly was meeting in a PC group, and went to the libraries for searching and reading in many of the excellent PC magazines from USA and Denmark, but here in we have no libraries, so I instead have to buy books, or try to search in Google. This book, which I received few days ago, is really excellent, by the short and easy writings which precisely are telling us all what we need to know, and a bit more. And this either if we are building, or rebuilding a PC, or if go visiting chops and there buy a new PC, maybe the first one. The book contains many good pictures, and many small details, as for example on the side 40, during the installation of the Memory Modules we are reminded that our bodies are containing electrostatic electricity, which can destroy this card, and then how to take care of this. And for example we on the side 152, concerning USC Flash Drives, learn that there are 2 different kinds, which we nearly never is mentioned in the specifications. Never before did I know anything about this difference which actually results in different speed, price, living time, and G bites.
